Sec No- 6	Team No- B13	Project Title- Land Acquisition Tracking System
Team Lead Roll Number		2520030066
Team Lead Name		Mohammad Rehan
Team Member Roll Number		2520090119
Team Member Name		Alluri Siddhartha Varma

1. Abstract

This project focuses on developing a Land Acquisition Tracking System under the Meeseva (Government Services) domain. It addresses issues faced by landowners, such as lack of transparency, delayed compensation updates, and difficulties in filing objections.

The system provides a centralized digital platform where users can track their land acquisition cases, view details, monitor compensation, and check payment status in real time. It also allows users to raise objections online.

An admin module enables government officials to manage cases, update records, review objections, and track payments. Notifications and history tracking improve communication and transparency.

The application will be built using React.js (frontend), Node.js and Express.js (backend), and MySQL or LocalStorage (database), ensuring improved efficiency, reduced paperwork, and better accessibility.

2. Module Mapping

Module Name	Assigned Roll Number(s)	Signature
User Authentication & Login Case Search & Dashboard Acquisition Details View Objection Filing System Compensation Display Module	2520030066	
Payment Status Tracking Notification System History & Timeline Module Admin Dashboard & Case Management Export & API Integration	2520090119	

3. Module Details

- The system is divided into multiple functional modules, each responsible for handling a specific aspect of the land acquisition process.
- The User Authentication Module manages user login and access control, ensuring that only authorized users can access their respective data. It verifies user credentials and maintains session information.
- The Case Search Module allows users to search for their land acquisition cases using identifiers such as case ID or personal details. It retrieves and displays relevant case information from the system.

- The Acquisition Details Module provides comprehensive information about the land acquisition, including land details, acquisition notices, and important dates related to the process.
- The Compensation Module displays the calculated compensation amount for the acquired land, including breakdown details such as land value and additional benefits.
- The Objection Filing Module enables users to submit objections or grievances related to compensation or acquisition details. It includes form submission and status tracking functionality.
- The Payment Status Module allows users to track the status of compensation payments, such as pending, processing, or completed.
- The Notification Module provides updates to users regarding important events such as objection approval, payment release, or case status changes.
- The History and Timeline Module maintains a chronological record of all activities related to a case, providing transparency and traceability.
- The Admin Dashboard Module allows government officials to manage cases, review objections, update compensation details, and monitor overall system activity.
- The Export Module enables users and administrators to download case details and reports in a structured format for record-keeping purposes.

4. Frameworks / Platforms / Software Used

HTML5, CSS, JavaScript (ES6+), React.js, Node.js, npm, Postman (API Testing), MySQL(optional), REST APIs, Express.js, Axios, React Router, Context API / Redux, LocalStorage, Bootstrap / Tailwind CSS
